

Principal Supply Points (PSP)

Product Overview

We offer full turnkey solutions to Principal Supply Points from feasibility to design, manufacture and on-site commissioning along with standalone LV Switchboards for integration by our clients.

Utilising our PADS approved Modular Construction we can tailor the product to suit the clients power requirements and special constraints.

At the heart of our PSP's is our range of Modular LV Switchboards designed and manufactured inline with National and European Standards inclusive of BS 61439-1&2 and have full PADS approval for use on the UK's Rail Network.

Designed with reliability and flexibility in mind, our product can be adapted to suit the clients specific needs. Further to this the Modular construction ensures the product can be modified over time to meet the clients future power requirements.
